MBI800 Strategic Information Systems Planning

Group Project Tutorial

Strategic Information Systems Plan for a New Zealand or Australian Organisation

Dr Yasas Sri Wickramasinghe

1. Overview

In groups of 4 to 6, choose a real organisation based in New Zealand or Australia and prepare a strategic information systems (SIS) plan for its next three years. The plan must support the organisation's vision, mission and objectives, and must include:

- a risk management framework
- ethical and cultural considerations
- at least one novel technology proposal (immersive technology such as AR, VR or MR, and/or AI or data science).

Each member is responsible for one part of the plan. You have five days to complete the work. Each group then presents its plan to the class.

2. Choosing an organisation

Choose an organisation that:

- is based in New Zealand or Australia
- publishes its vision, mission and strategic objectives
- has a recent annual report, strategic plan or statement of intent available online
- depends on information systems to serve its customers or run its operations.

Each group must choose a different organisation. Do not choose the organisations already covered in lectures (Inland Revenue, Xero, Canva, Airbnb, Netflix, Alibaba, STC).

Examples:

Sector	New Zealand	Australia
Transport	Air New Zealand, Auckland Transport	Qantas Group, Transport for NSW
Banking	Kiwibank, ASB	Commonwealth Bank, Bendigo and Adelaide Bank
Telecommunications	Spark, One NZ	Telstra, Optus
Health	Health New Zealand | Te Whatu Ora, Southern Cross Health Society	Medibank, Australian Red Cross Lifeblood
Retail and food	The Warehouse Group, Fonterra	Woolworths Group, JB Hi-Fi
Public sector and education	Auckland Council, University of Auckland	Services Australia, Monash University
Energy and utilities	Meridian Energy, Watercare	AGL Energy, Sydney Water

Sector	New Zealand	Australia
Iwi organisations	Te Rūnanga o Ngāi Tahu, Waikato-Tainui	

Use public sources only: annual reports, strategic plans, investor presentations, privacy and sustainability reports, and reputable news. Where you need to make an assumption, state it as an assumption.

3. Roles

Each member takes one role and writes the matching section of the report. All members contribute to the executive summary and the conclusion.

Role	Section	Responsible for
1. Organisation analyst	2	Organisation profile, vision, mission, objectives, SWOT, Business Model Canvas
2. Current-state analyst	3	Current information systems, Iceberg Model analysis, six process dimensions, gap analysis
3. Strategy lead	4 and 8	IS strategy, initiatives, priorities, implementation roadmap
4. Risk lead	5	Risk management framework, risk register, security controls
5. Ethics and culture lead	6	Privacy law, Indigenous data sovereignty, ethical and cultural considerations
6. Technology lead	7	Novel technology proposal (immersive technology and/or AI or data science)

Groups of 5: one member takes Roles 1 and 2.
Groups of 4: one member takes Roles 1 and 2, and another takes Roles 4 and 5.

4. Report structure

The report should be about 3,000 to 4,000 words, not including tables, references and appendices. Use APA 7 referencing.

No.	Section	Role
1	Executive summary	All
2	Organisation and strategic direction	Role 1
3	Current information systems	Role 2
4	IS strategy and initiatives	Role 3
5	Risk management	Role 4
6	Ethical and cultural considerations	Role 5
7	Novel technology proposal	Role 6
8	Implementation roadmap	Role 3
9	Conclusion and references	All

Section 1: Executive summary

Half a page. The organisation, the main IS gaps, the recommended initiatives, the key risks and the first steps.

Section 2: Organisation and strategic direction

- Short profile: sector, size, ownership, customers, competitors.
- Vision, mission, values and strategic objectives (quoted and cited).
- SWOT analysis and Business Model Canvas (Lectures 4 and 5).

Section 3: Current information systems

- Main systems and digital channels the organisation uses.
- Iceberg Model analysis of one recurring problem (Lecture 2).
- Six process dimensions: how the organisation plans its IS (Lecture 3).
- Gap analysis: objectives compared with what current systems support.

Section 4: IS strategy and initiatives

- Three to five IS strategic themes linked to the organisation's objectives.
- Four to six initiatives, each checked with the four feasibility tests: operational, technical, economic and schedule (Lecture 4).
- Priority of each initiative, with reasons.

Section 5: Risk management

- Choose a framework (NIST RMF, ISO/IEC 27005, COBIT, OCTAVE or FAIR) and explain why it suits this organisation (Lecture 6).
- Apply the steps of the framework to the plan.
- Risk register with at least eight risks. Columns: risk, likelihood (1 to 5), impact (1 to 5), rating, controls, owner.
- Controls for the top three risks, including security, backup and recovery (Lecture 10).

Section 6: Ethical and cultural considerations

- Privacy law: Privacy Act 2020 (NZ) or Privacy Act 1988 and the Australian Privacy Principles.
- Indigenous data sovereignty: Te Tiriti o Waitangi and the Te Mana Raraunga principles (NZ), or the Maiam nayri Wingara principles (Australia). The CARE principles apply in both.
- Consent, consultation with affected communities, and accessibility.
- Fairness, transparency and human oversight where AI or automated decisions are used.
- A stakeholder table: stakeholder, impact, concern, response.

Section 7: Novel technology proposal

- One or two proposals using immersive technology (AR, VR or MR) and/or AI or data science (Lecture 9).
- The objective it supports and the problem it solves.
- Users, data required and technology needed.
- Four feasibility tests and an Idea Canvas (Lectures 4 and 5).
- A pilot plan: scope, duration and success measures.

Section 8: Implementation roadmap

A timeline over three years (0 to 12, 12 to 24 and 24 to 36 months) showing each initiative, who is responsible, and how progress will be measured.

Section 9: Conclusion and references

A short conclusion and a reference list in APA 7. Put large tables and canvases in appendices.

5. Presentation

- Each team has 15 minutes.
- Every student must present their own part.
- Record the presentation with audio (for example in Microsoft Teams, Zoom or PowerPoint).

6. Peer rating

During the presentations, each student completes one peer rating sheet. Rate every group except your own on a scale of 1 to 5 for each criterion, and write one strength and one improvement for each group.

Criterion	What to look for
1. The organisation	Understanding of the organisation's vision, mission, objectives and situation
2. Strategic alignment	Initiatives linked to objectives, with clear priorities and roadmap
3. Risk management	Suitable framework, realistic risks and controls
4. Ethics and culture	Privacy, Indigenous data sovereignty and fairness addressed clearly
5. Novel technology	Realistic immersive, AI or data science proposal that solves a real problem
6. Delivery and teamwork	Within time, every member presents, clear slides, good answers

7. Submission

Submit all materials together through the Blackboard link shared by your learning facilitator:

- the report (Word or PDF)
- the presentation slides
- the presentation recording with audio
- the team roles table (Appendix A).

Appendix A: Team roles
